Quanta is awarded NHS Grant for the development of a Patient Centric self-care Haemodialysis machine

Quanta, in partnership with the NKF, Leeds University Hospital and Newcastle University, has been awarded the i4i "Invention for Innovation" grant which will enable the company to tailor the design of SelfCare+ to the needs of patients and of the NHS. The grant will help resource additional marketing, engineering and design specifically for patient usability and other patient centric aspects.

David Oram, Quanta's Engineering Manager, says *"Although SelfCare+ has always been intended to be used by patients; the i4i grant will enable us to go to the next level in patient usability design"*.

Quanta will conduct extensive consultation via workshops and focus groups with patients and renal specialists from leading UK renal centres. The data gathered from these activities will enable Quanta to fine tune the design of SelfCare+ so that the entire dialysis process is as patient friendly as possible.
